Routing Requests

Michael Van Sickle

@vansimke

Introduction

Role of a controller

Static routing

Parametric routing

Third-party routers

```
func main() {
    templates := populateTemplates()
   http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
        requestedFile := r.URL.Path[1:]
        template := templates[requestedFile+".html"]
        var context interface{}
        switch requestedFile {
        case "shop":
            context = viewmodel.NewShop()
        default:
            context = viewmodel.NewHome()
        if template != nil {
            err := template.Execute(w, context)
           if err != nil {
                log.Println(err)
        } else {
           w.WriteHeader(404)
   })
   http.Handle("/img/", http.FileServer(http.Dir("public")))
   http.Handle("/css/", http.FileServer(http.Dir("public")))
   http.ListenAndServe(":8000", nil)
```

```
func main() {
    templates := populateTemplates()
   http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
        requestedFile := r.URL.Path[1:]
        template := templates[requestedFile+".html"]
        var context interface{}
        switch requestedFile {
        case "shop":
            context = viewmodel.NewShop()
        default:
            context = viewmodel.NewHome()
        if template != nil {
            err := template.Execute(w, context)
           if err != nil {
                log.Println(err)
        } else {
           w.WriteHeader(404)
   })
   http.Handle("/img/", http.FileServer(http.Dir("public")))
   http.Handle("/css/", http.FileServer(http.Dir("public")))
   http.ListenAndServe(":8000", nil)
```

Setup

```
func main() {
    templates := populateTemplates()
   http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
        requestedFile := r.URL.Path[1:]
        template := templates[requestedFile+".html"]
        var context interface{}
        switch requestedFile {
        case "shop":
            context = viewmodel.NewShop()
        default:
            context = viewmodel.NewHome()
        if template != nil {
            err := template.Execute(w, context)
           if err != nil {
                log.Println(err)
        } else {
           w.WriteHeader(404)
   })
   http.Handle("/img/", http.FileServer(http.Dir("public")))
   http.Handle("/css/", http.FileServer(http.Dir("public")))
   http.ListenAndServe(":8000", nil)
```

Setup

Serve pages

```
func main() {
    templates := populateTemplates()
   http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
        requestedFile := r.URL.Path[1:]
        template := templates[requestedFile+".html"]
        var context interface{}
        switch requestedFile {
        case "shop":
            context = viewmodel.NewShop()
        default:
            context = viewmodel.NewHome()
        if template != nil {
            err := template.Execute(w, context)
           if err != nil {
                log.Println(err)
        } else {
           w.WriteHeader(404)
   })
   http.Handle("/img/", http.FileServer(http.Dir("public")))
   http.Handle("/css/", http.FileServer(http.Dir("public")))
   http.ListenAndServe(":8000", nil)
```

Setup

Serve pages

Static resources

```
http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
    requestedFile := r.URL.Path[1:]
    template := templates[requestedFile+".html"]
    var context interface{}
    switch requestedFile {
    case "shop":
        context = viewmodel.NewShop()
    default:
        context = viewmodel.NewHome()
    if template != nil {
        err := template.Execute(w, context)
        if err != nil {
            log.Println(err)
    } else {
        w.WriteHeader(404)
})
```

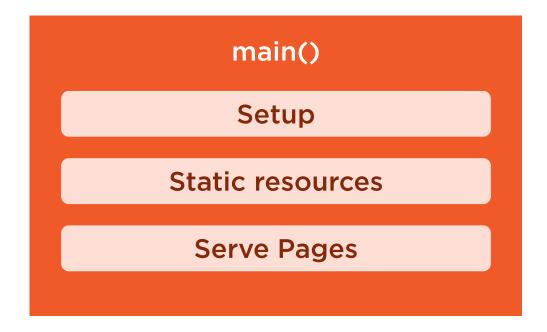

```
http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
    requestedFile := r.URL.Path[1:]
    template := templates[requestedFile+".html"]
    var context interface{}
    switch requestedFile {
    case "shop":
        context = viewmodel.NewShop()
    default:
        context = viewmodel.NewHome()
    if template != nil {
        err := template.Execute(w, context)
        if err != nil {
            log.Println(err)
    } else {
        w.WriteHeader(404)
})
```

General

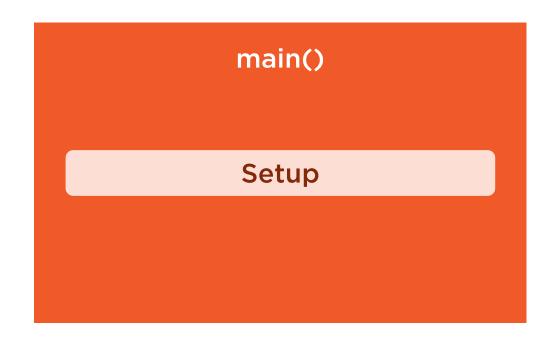

```
http.HandleFunc("/", func(w http.ResponseWriter, r *http.Request) {
    requestedFile := r.URL.Path[1:]
    template := templates[requestedFile+".html"]
    var context interface{}
    switch requestedFile {
    case "shop":
        context = viewmodel.NewShop()
    default:
        context = viewmodel.NewHome()
    if template != nil {
        err := template.Execute(w, context)
        if err != nil {
            log.Println(err)
    } else {
        w.WriteHeader(404)
})
```

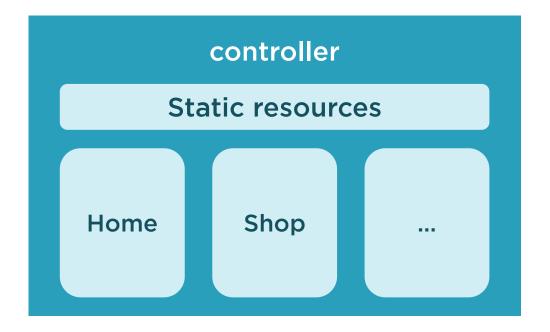

General

Page specific

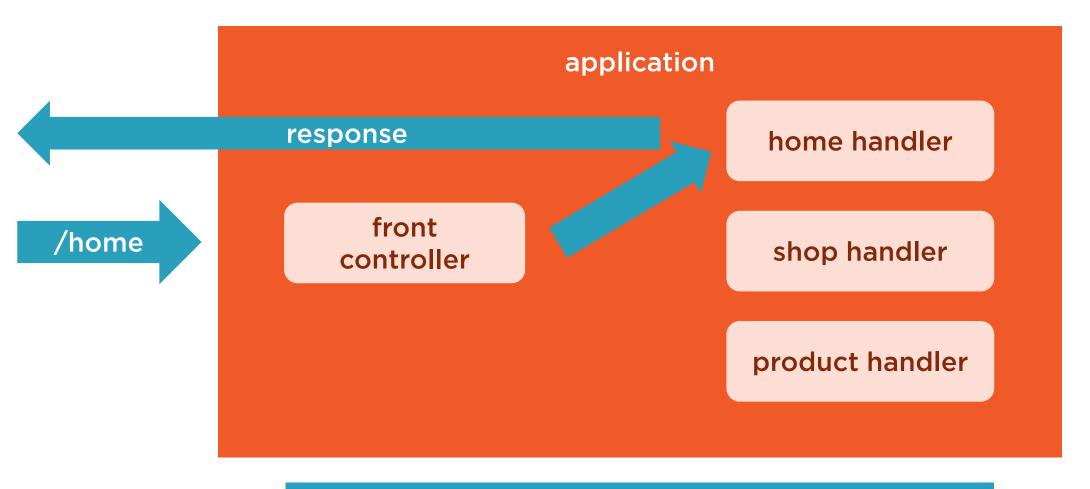

Static Routing

Handler with most specific match handles request

Parametric Routing

```
/home
```

/shop

Static routes - one handler per page

/products/lemons

/products/oranges

Parametric Routing

/home

/shop

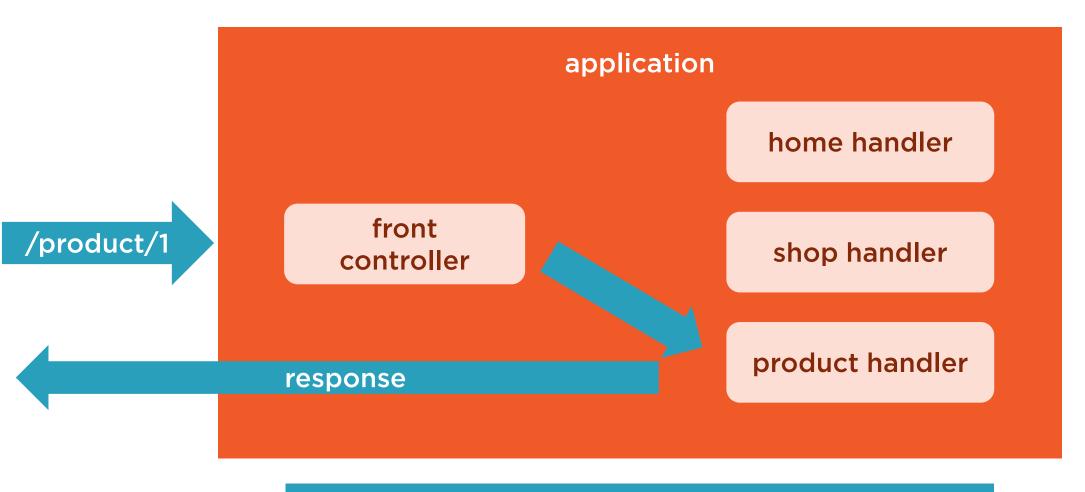

Static routes - one handler per page

/products/lemons
/products/oranges

Parametric routes - family of pages

Parametric Routing

Handler responsible for working with parameters

Third-party Routers

https://github.com/gorilla/mux

Highly configurable

httprouter

https://github.com/julienschmidt/httprouter

Extremely fast

Summary

Role of a controller

Static routing

Parametric routing

Third-party routers
